Product Pulse — Activation & Retention

Independent case study • Synthetic data • Jan–Aug 2026

Click a device or channel bar to filter • Click blank space in that chart to reset

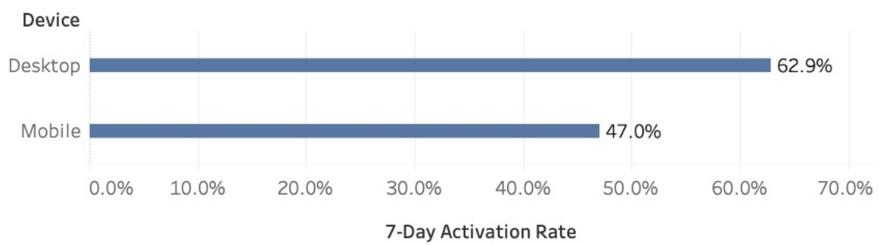

Total Users	Activation Rate	Week 4 Retention	Paid Conversion Rate
6,000	53.6%	19.4%	9.0%

Cohort Retention

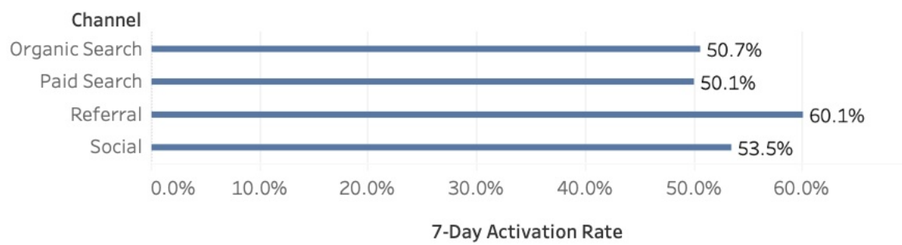

Share of each signup cohort active in weeks 1–4 after signup

Month of Si..	Week 1	Week 2	Week 3	Week 4
January	29.0%	28.2%	21.3%	20.5%
February	31.4%	25.9%	24.5%	17.3%
March	32.6%	25.9%	21.6%	17.8%
April	32.8%	24.5%	23.7%	22.2%
May	32.7%	27.8%	24.4%	21.2%
June	29.8%	27.1%	20.7%	19.0%
July	29.9%	24.8%	19.3%	18.0%
August	27.9%	26.6%	20.4%	18.7%

Activation by Device

Activation by Channel

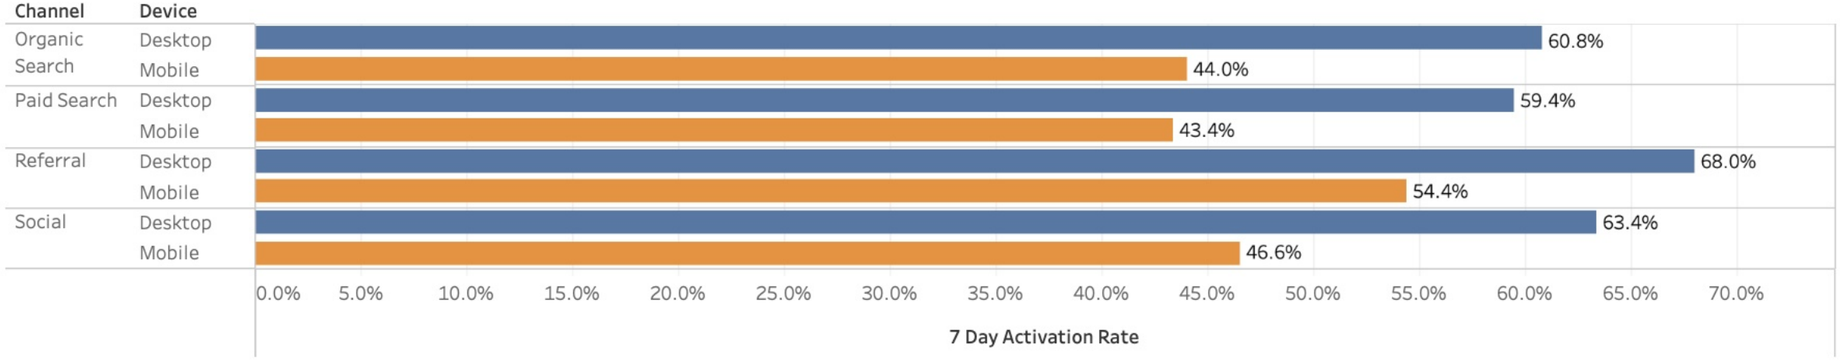

Finding: Mobile activation is 47.0% versus 62.9% on desktop—a 15.9 percentage-point gap.
Proposed experiment: Test a shorter mobile onboarding flow. Measure 7-day activation, with week 4 retention and 30-day paid conversion as guardrails.
Note: Findings use synthetic data; the experiment has not been run.

Product Deep Dive

Mobile activation is lower across all four acquisition channels

Template Usage and Retention

Higher observed retention among template users • Association does not establish causation

Key finding: Mobile activation is lower across all four acquisition channels, with gaps of 13.6–16.8 percentage points compared with desktop.
Template finding: Week-4 retention is 34.1% for template users (n=1,924), versus 12.4% for non-users (n=4,076). This is an observed association.
Proposed next step: Test a shorter mobile onboarding flow and measure 7-day activation, week-4 retention, and 30-day paid conversion.
Based on synthetic data. These comparisons do not establish causation. The experiment has not been run.
